Quick answer

A data analyst's pay depends on skills, experience, city, industry and company type, so any single average is misleading. The best approach is to compare current job posts and published surveys, and to know which skills move pay.

Why one salary number is misleading

Pay for data analysts varies widely. A fresher at a small firm, a mid-level analyst in a bank and a senior analyst in a product company are in very different bands. Averages also mix very different roles under one title. Use ranges, check how recent they are, and note the city, experience level and source.

What affects a data analyst's pay

Factor	How it matters
Skills	SQL depth, BI tools, Python and statistics usually increase value
Experience	Years and the complexity of problems you have solved
Industry	Banking, e-commerce and tech may pay differently from other sectors
City and company type	Large cities, product firms and multinationals often differ from smaller...
Evidence	Projects, certificates and interview performance

How to research salaries fairly

1

Collect several current job posts for your target role and city.

2

Check published salary surveys and note the date and sample size.

3

Talk to people in similar roles.

4

Record ranges, not single numbers.

5

Adjust for your skills and experience honestly.

Skills that commonly increase your value

Advanced SQL (window functions, CTEs).

A BI tool at dashboard-design level.

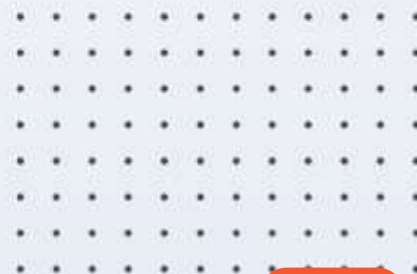

Python for analysis and automation.

Statistics and A/B testing.

Clear storytelling with data.

Frequently asked questions

How much does a data analyst earn?

It varies by skills, experience, city, industry and company. Check current job posts and dated salary surveys for your situation instead of relying on a single average.

What affects a data analyst's salary?

Skills such as SQL and BI tools, years of experience, industry, city, company type and the evidence you can show of your work.

Do data analysts with Python earn more?

Python can widen the roles you qualify for, which often helps pay, but results depend on the role and employer.
