Quick answer

Selenium interviews usually cover locators, waits, handling alerts and frames, framework design with the Page Object Model, and a test framework such as TestNG. Sample questions with short answers are below.

Clear concepts

Short, plain-language explanations

Hands-on practice

Examples and exercises to try yourself

Job-focused prep

Questions and checklists for interviews

What interviewers usually probe

Locators and when to choose each.

Implicit, explicit and fluent waits.

Handling alerts, frames, windows and dropdowns.

Framework design: Page Object Model, data-driven testing.

TestNG or JUnit/pytest, reporting and CI.

Sample interview questions

What is the difference between implicit and explicit wait?

An implicit wait sets a default polling time for finding any element. An explicit wait waits for a specific condition on a specific element, such as it being clickable.

Which locator would you prefer and why?

Prefer stable, unique locators such as ID or a dedicated test attribute, then CSS selectors. Use relative XPath when needed and avoid long absolute XPath because it breaks when the page layout changes.

Sample interview questions

What is the Page Object Model?

A pattern in which each page has a class holding its locators and actions. Tests call readable methods, and a change in the page is fixed in one place, which improves maintainability.

How do you handle a `StaleElementReferenceException`?

It occurs when the element has been replaced in the DOM after you found it. Locate the element again, wait for the page to settle with an explicit wait, and avoid holding element references longer than needed.

Sample interview questions

What is Selenium Grid?

Selenium Grid lets tests run in parallel across different browsers, versions and machines by routing sessions to available nodes, which reduces total run time.

Preparation tips

Be ready to write a short locator and wait example.

Explain your framework structure from a real project.

Know how you would reduce flaky tests.

How to use these PDFs

STEP 1

Read the roadmap

Start at the stage that matches your level.

STEP 2

Practise each topic

Try it yourself instead of only reading.

STEP 3

Revise key concepts

Use the tables before an interview or exam.

STEP 4

Move to the next stage

Go on when you can explain this one in your own words.

Frequently asked questions

What are common Selenium interview questions?

Common topics are locators, waits, handling alerts and frames, the Page Object Model, TestNG or pytest, and Selenium Grid.

What is the difference between findElement and findElements?

findElement returns the first matching element and throws an exception if none exists. findElements returns a list of all matches, which is empty if there are none.

How do I handle dynamic elements in Selenium?

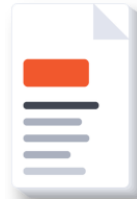

Use explicit waits with suitable conditions and stable locators such as IDs, test attributes or relative XPath instead of position-based paths.
