Evidence such as screenshots or reports.

A summary of what you found and what risk remains.

Portfolio checklist

Sample defect report and test case sheet.

Common mistakes

Testing only the happy path.

Automating before understanding the application.

Frequently asked questions

What are good software testing projects for beginners?

Testing an e-commerce site manually, writing an API test collection and automating a simple login flow are good starting projects.

What should a testing project contain?

A test plan or scope, test cases, defect reports, evidence and a summary. Add automation or API tests for a stronger project.

Which websites can I use to practise testing?

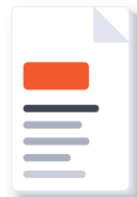

Use practice or demo applications built for testing, or your own small apps. Avoid testing live company systems without permission.
